

8. Project Demonstration

Project Name

ComicCraft - AI Comic Story Creator using Gemini Models

1. Introduction

The Project Demonstration explains how the ComicCraft application works from start to finish.

The demonstration shows the user interface, story creation process, Gemini AI integration, generated comic content, and final comic preview.

2. Demonstration Objectives

The main objectives of the demonstration are:

- To show the working of the ComicCraft application.
- To demonstrate the user interface.
- To demonstrate AI-powered story generation.
- To show character, scene, and dialogue generation.
- To display the final comic preview.
- To explain the complete project workflow.

3. Demonstration Workflow

Open ComicCraft ↓ Enter Story Idea ↓ Enter Character Details ↓ Click Generate ↓ Gemini AI Processes the Request ↓ Story Content is Generated ↓ Characters + Scenes + Dialogues ↓ Comic Preview

4. Step-by-Step Demonstration

Step 1: Open the Application

Launch the ComicCraft web application using a web browser.

The Home Page will be displayed.

Step 2: Enter Story Idea

Enter a creative story idea in the provided input field.

Example:

A young girl discovers a magical book that brings her drawings to life.

Step 3: Enter Character Details

Provide details about the main characters.

Example:

Character: Maya Role: Young student Personality: Curious and creative

Step 4: Generate the Comic Story

Click the Generate button.

The request is sent to the Flask backend, which communicates with the Gemini AI model.

Step 5: AI Story Generation

Gemini AI processes the user's prompt and generates relevant comic content.

The generated content may include:

- Story title
- Characters
- Scenes
- Dialogues
- Story descriptions

Step 6: View Comic Preview

The generated content is displayed on the Comic Preview page.

The user can view the story in an organized comic-style format.

5. Demonstration Screenshots

Screenshots can be added below to show the major stages of the application.

Home Page

Add screenshot of the ComicCraft Home Page here.

Story Creation Page

Add screenshot of the Story Creation Page here.

AI Generated Story

Add screenshot of the generated story here.

Comic Preview

Add screenshot of the final Comic Preview here.

6. Demo Video

A demonstration video can be added here to show the complete working of the application.

Demo Video: Add the project demonstration video link here.

7. GitHub Repository

The complete source code and project documentation can be accessed through the project's GitHub repository.

GitHub Link: Add the GitHub repository link here.

8. Expected Demonstration Output

At the end of the demonstration, the application should successfully:

- Accept the user's story idea.
- Accept character details.
- Send the request to Gemini AI.
- Generate a creative comic story.
- Display characters, scenes, and dialogues.
- Show the final comic preview.

9. Demonstration Checklist

- Application opens successfully
- Home page is displayed
- Story idea can be entered
- Character details can be entered

- Generate button works
- Gemini AI generates content
- Generated story is displayed
- Comic preview works
- Screenshots are added
- Demo video link is added
- GitHub link is added

10. Conclusion

The Project Demonstration presents the complete working process of ComicCraft. It demonstrates how user input is processed by Gemini AI and transformed into a creative comic story with characters, scenes, and dialogues.
