

7. Project Documentation

Project Name

ComicCraft - AI Comic Story Creator using Gemini Models

1. Introduction

Project Documentation contains all the important information related to the ComicCraft application.

It explains the project idea, requirements, design, development, testing, technologies, features, and final outcome.

2. Purpose of Documentation

The purpose of this documentation is to:

- Explain the project clearly.
- Describe the development process.
- Document the technologies used.
- Explain the system architecture.
- Record testing activities.
- Provide instructions for understanding the project.
- Maintain a complete project record.

3. Project Documentation Structure

The project documentation is organized into the following sections:

```
ComicCraft AI/ | ├── 1_Brainstorming_and_Ideation/ | └── README.md | ├──  
2_Requirement_Analysis/ | └── README.md | ├── 3_Project_Design/ | └── README.md |  
└── 4_Project_Planning/ | └── README.md | ├── 5_Project_Development/ | └──  
README.md | ├── 6_Project_Testing/ | └── README.md | └── 7_Project_Documentation/  
└── README.md
```

4. Project Overview

ComicCraft is an AI-powered web application that helps users create creative comic stories using Google's Gemini AI models.

The application takes user input such as a story idea and character details and uses AI to generate story content, scenes, and dialogues.

5. Technologies Used

Technology| Purpose HTML| Web page structure CSS| User interface design JavaScript| Frontend interaction Python| Backend programming Flask| Web application framework Google Gemini| AI story generation Git| Version control GitHub| Project repository Visual Studio Code| Development environment

6. Main Features

- User-friendly interface
- Story idea input
- Character details input
- AI-powered story generation
- Character generation
- Scene generation
- Dialogue generation
- Comic preview
- Error handling

7. System Workflow

User ↓ Enter Story Idea ↓ Enter Character Details ↓ Flask Backend ↓ Gemini AI ↓ Generate Story Content ↓ Characters + Scenes + Dialogues ↓ Comic Preview

8. Project Files

Important project files include:

- "app.py" – Main Flask application.
- "routes.py" – Handles application routes.
- "requirements.txt" – Contains required Python packages.
- "templates/" – Contains HTML pages.
- "static/" – Contains CSS and other static files.

9. Documentation Sections

Brainstorming and Ideation

Contains the project idea, problem identification, proposed solution, and initial concepts.

Requirement Analysis

Contains functional, non-functional, hardware, software, and user requirements.

Project Design

Contains system architecture, modules, data flow, and interface design.

Project Planning

Contains development phases, timeline, resources, responsibilities, and risk management.

Project Development

Contains information about implementation, frontend, backend, Gemini integration, and development workflow.

Project Testing

Contains test cases, testing methods, test scenarios, and testing results.

10. Screenshots

Screenshots of the following application pages can be added to this section:

- Home Page
- Story Creation Page
- Character Input Page
- Generated Story Page
- Comic Preview Page

11. GitHub Repository

The complete source code and project documentation should be maintained in the project's GitHub repository.

12. Final Deliverables

The final project documentation should include:

- Project source code
- README files

- Project screenshots
- Test results
- GitHub repository
- Project presentation
- Final project report

13. Conclusion

The Project Documentation provides a complete record of the ComicCraft project. It brings together the project's planning, design, development, and testing information in an organized format.

This documentation helps users, developers, and evaluators understand the purpose, implementation, and functionality of the ComicCraft application.
